## GPS/GLONASS/Galileo SMD Patch Antenna

**Part No:**  
SGGP.18.4.A.08

**Description:**  
18\*18\*4mm GPS/GLONASS/Galileo SMD Patch Antenna

### Features:

- SMD Direct Mount Ceramic Patch Antenna
- GPS/Galileo/GLONASS Antenna
- GPS L1/Galileo E1 (1575.42 MHz) – 78% Efficiency
- GLONASS L1 (1602 MHz) – 80% Efficiency
- Dimensions: 18\*18\*4mm
- RoHS & Reach Compliant

## 1. Introduction

The Taoglas SGGP.18 is a ceramic GPS/GLONASS/Galileo passive patch antenna designed for optimal performance on GPS L1/Galileo E1 band (1575.42 MHz) and GLONASS L1 band (1602 MHz). With a low-profile thickness of just 4mm and convenient mounting via standard SMD process, it is ideal for high-volume, low-cost assembly applications. SGGP.18 is designed for applications in navigation devices, vehicle tracking/fleet management systems, and telematics devices. It is an excellent choice for applications in transportation, defense, marine, agriculture, and navigation industries.

This antenna has been tuned for use on a 50mm\*50mm ground plane to achieve 2.86 dBi gain at 1575.42 MHz and 3.04 dBi gain at 1602 MHz. In addition to excellent efficiency, it also offers a broadly hemispherical radiation pattern with stable gain across elevations.

SGGP.18 is manufactured and tested in an IATF16949 first tier automotive approved facility. For further optimization to customer-specific device environments, custom tuned patch antennas can be supplied, subject to NRE and MOQ.

For further information or support with integrating this antenna into your device, please contact your regional Taoglas customer support team.

## 2. Specifications

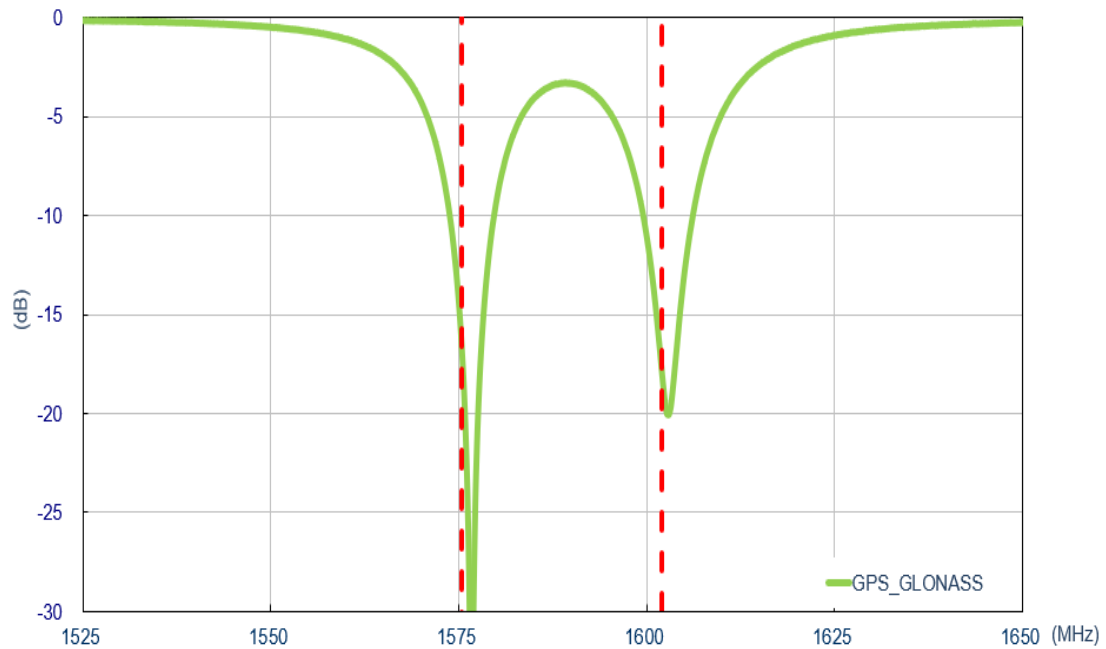

GNSS Frequency Bands Covered

## 5. Mechanical Drawing (Units: mm)

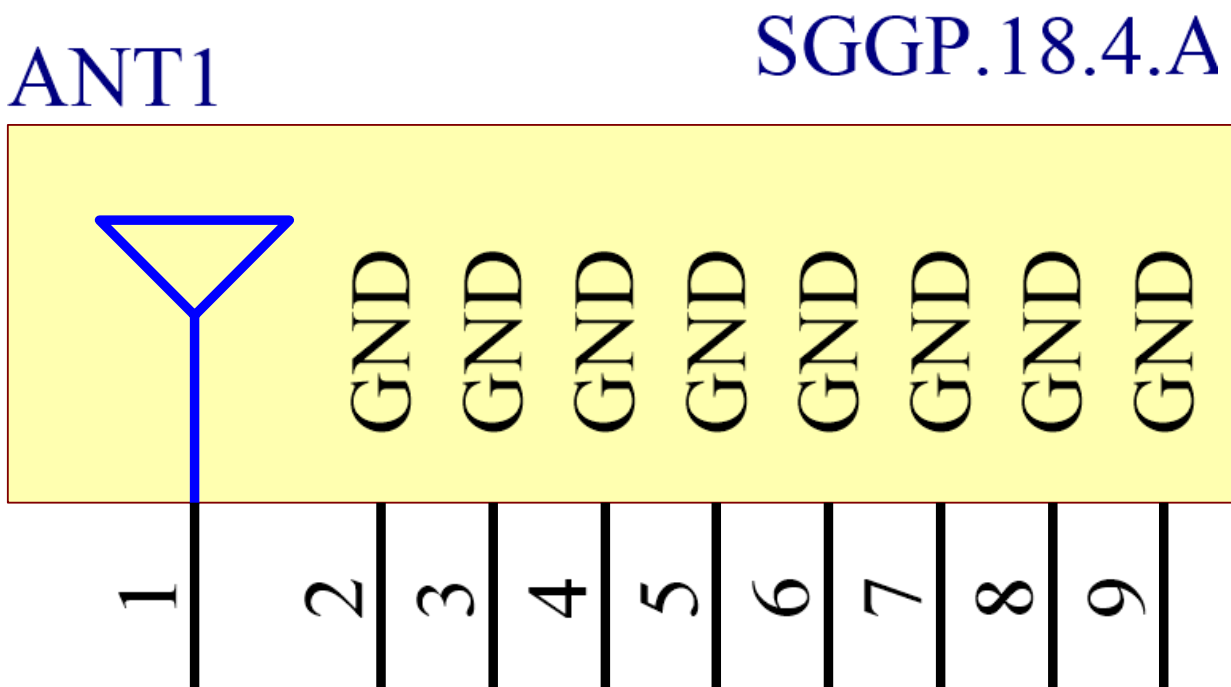

## 6. Antenna Integration Guide

## 6.1 Schematic Symbol and Pin Definition

The circuit symbol for the antenna is shown below. The antenna has 1 pin as an RF Feed and 8 pins used for ground.

Pin	Description
1	RF Feed
2, 3, 4, 5, 6, 7, 8,9	Ground

Please note you can download the design files, 3D model, 2D drawings and CST simulation files from the website here:

## 6.2 Antenna Integration

Whatever the size of the PCB, the antenna should ideally be placed on the PCB's center, to take advantage of the ground plane.

## 6.3 PCB Layout

The footprint and clearance on the PCB must meet the antenna specification. Please note there are no thermal release in the ground plane. It is important to have a solid ground plane under the antenna.

## 7. Packaging

200 pc SGGP.18.4.A.08 per reel  
 Dimensions - Ø330\*33mm  
 Weight - 2.125Kg

200 pc SGGP.18.4.A.08 per small box  
Dimensions - 350\*340\*67mm  
Weight - 2.125Kg

800 pcs SGGP.18.4.A.08 per carton  
Dimensions - 370\*360\*305mm  
Weight - 8.5Kg

## 8. Soldering Recommendations

### 8.1 Flux Solder

Use rosin-based flux. Don't use highly acidic flux with halide content exceeding 0.2wt%(chlorine conversion value).

- Use Sn solder.

### 8.2 Flux Solder

- Pre-heating should be in such a way that the temperature difference between solder and product surface is limited to 150°C max. Cooling into solvent after soldering also should be in such a way that temperature difference is limited to 100°C max. Unwrought pre-heating may cause cracks on the product, resulting in the deterioration of products quality.

### 8.3 Reworking with Soldering Iron

The following conditions must be strictly followed when using a soldering iron.

Pre -heating	150°C , 1 min
Tip temperature	290°C max
Soldering iron output	30w max
Soldering time	3 Second max

Changelog for the datasheet

**SPE-18-8-067 - SGGP.18.4.A.08**

**Revision: B (Current Version)**

Date:	2021-10-20
Changes:	Full datasheet template update, Addition of MSL to spec table & Integration guide.
Changes Made by:	Gary West

**Previous Revisions**

**Revision: A (Original First Release)**

Date:	2018-07-02
Notes:	First Release
Author:	MC
