

DELIVERY SPECIFICATION

SPEC. No. A-YFF-g

D A T E : Feb., 2022

To

Non-Controlled Copy

CUSTOMER'S PRODUCT NAME	TDK PRODUCT NAME 3-terminal Feed Through Filter Tape packaging 【RoHS compliant】 YFF18, YFF21, YFF31 Type
-------------------------	---

Please return this specification to TDK representatives with your signature.
 If orders are placed without returned specification, please allow us to judge that specification is accepted by your side.

RECEIPT CONFIRMATION

DATE: _____ YEAR _____ MONTH _____ DAY _____

Test conditions in this specification based on AEC-Q200 for automotive application.

TDK Corporation
 Sales
 Electronic Components
 Sales & Marketing Group

Engineering
 Electronic Components Business Company

APPROVED	Person in charge

APPROVED	CHECKED	Person in charge

SCOPE

This delivery specification shall be applied to 3-terminal feed through filter to be delivered to _____.

PRODUCTION PLACES

Production places defined in this specification shall be TDK Corporation, TDK(Suzhou)Co.,Ltd and TDK Components U.S.A.,Inc.

PRODUCT NAME

The name of the product to be defined in this specifications shall be YFF◇◇○○△□□□ x.

CONTENTS

1. CODE CONSTRUCTION
2. RATED CURRENT
3. OPERATING TEMPERATURE RANGE
4. STORING CONDITION AND TERM
5. INDUSTRIAL WASTE DISPOSAL
6. PERFORMANCE
7. INSIDE STRUCTURE AND MATERIAL
8. PACKAGING
9. SOLDERING CONDITION
10. EQUIVALENT CIRCUIT DIAGRAM
11. CAUTION
12. TAPE PACKAGING SPECIFICATION

<EXPLANATORY NOTE>

When the mistrust in the spec arises, this specification is given priority. And it will be confirmed by written spec change after conference of both posts involved.

This specification warrants the quality of the 3-terminal feed through filter. Products should be evaluated or confirmed a state of mounted on your product.

If the use of the products goes beyond the bounds of this specification, we can not afford to guarantee.

Date	SPEC. No.
February, 2022	A-YFF-g

1. CODE CONSTRUCTION

(Example)	YFF18	AC	1C	104	M	T	○○○○
	YFF21	AC	1E	104	M	T	○○○○
	<u>YFF31</u>	<u>AH</u>	<u>2A</u>	<u>105</u>	<u>M</u>	<u>T</u>	<u>○○○○</u>
	(1)	(2)	(3)	(4)	(5)	(6)	(7)

(1)Type

Type	Dimensions (mm)				
	L	W	T	B	C
YFF18	1.60±0.20	0.80±0.15	0.60±0.10	0.25±0.20	0.40±0.20
		0.80±0.20	0.80±0.20		
	1.60 ^{+0.30} _{-0.10}	0.80 ^{+0.30} _{-0.10}	0.80 ^{+0.30} _{-0.10}		
YFF21	2.00±0.20	1.25±0.20	0.85±0.15	0.30±0.20	0.50 ^{+0.30} _{-0.20}
YFF31	3.20±0.20	1.60±0.20	1.30±0.20	0.40±0.30	1.20±0.30

*As for each item, please refer to detail page on TDK web.

(2)Product Classification

Symbol	Product Classification
A C	For Automotive general use
A H	For Automotive Large-current power Line

(3)Rated Voltage

Symbol	Rated Voltage
2 A	DC 100 V
1 H	DC 50 V
1 E	DC 25 V
1 C	DC 16 V
0 J	DC 6.3 V
0 G	DC 4 V

(4) Rated Capacitance

Stated in three digits and in units of pico farads (pF). The first and Second digits identify the first and second significant figures of the capacitance, the third digit identifies the multiplier.

(Example)

Symbol	Rated Capacitance
104	100,000pF
105	1,000,000pF

(5)Capacitance tolerance

Symbol	Tolerance
M	± 20 %

(6)Packaging

Symbol	Packaging
T	Taping

(7)TDK internal code

2. RATED CURRENT

Rated current depend on operating temperature.
As for details, please refer to detail page on TDK web.

3. OPERATING TEMPERATURE RANGE

Min. operating Temperature	Max. operating Temperature	Reference Temperature
-55°C	125°C	25°C

4. STORING CONDITION AND TERM

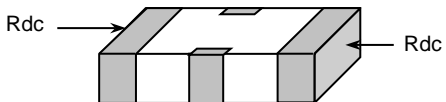

Storing temperature	Storing humidity	Storing term
5~40°C	20~70%RH	Within 6 months upon receipt.

5. INDUSTRIAL WASTE DISPOSAL

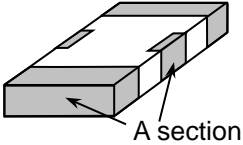

Dispose this product as industrial waste in accordance with the industrial Waste Law.

6. PERFORMANCE

Table 1

No.	Item	Performance	Test or inspection method
1	External Appearance	No defects which may affect performance.	Inspect with magnifying glass (3×).
2	Insulation Resistance	10,000MΩ or 500MΩ·μF min. (As for the products of rated voltage 16V DC and lower, 100MΩ·μF min.), whichever smaller.	Measuring voltage : Rated voltage Voltage application time : 60s.
3	Direct Current Resistance (Rdc)	Please refer to detail page on TDK web.	Measuring current shall be 100mA max. 
4	Voltage Proof	Withstand test voltage without insulation breakdown or other damage.	Apply voltage : 2.5 × rated voltage Voltage application time : 1s. Charge / discharge current : 50mA or lower
5	Capacitance	Within the specified tolerance.	As for measuring condition, please contact with our sales representative.
6	Robustness of Terminations	No sign of termination coming off, breakage of ceramic, or other abnormal signs.	Reflow solder the products on a P.C.Board shown in Appendix 2. Apply a pushing force gradually to a specimen as shown in the following figure. pushing force : 17.7N. 
7	Bending	External appearance Capacitance Direct current Resistance (Rdc)	No mechanical damage. Change from the value before test ± 12.5 % Please contact with our sales representative. Reflow solder the products on a P.C.Board shown in Appendix 1 and bend it for 2mm. (1mm is applied for YFF18AC0G106M and YFF31AH type.)  (Unit : mm)

(continued)

No.	Item	Performance	Test or inspection method	
8	Solderability	<p>New solder to cover over 75% of termination. 25% may have pin holes or rough spots but not concentrated in one spot. Ceramic surface of A sections shall not be exposed due to melting or shifting of termination material.</p> 	<p>Solder : Sn-3.0Ag-0.5Cu</p> <p>Flux : Isopropyl alcohol (JIS K 8839) Rosin (JIS K 5902) 25% solid solution.</p> <p>Solder temp. : 245±5°C</p> <p>Dwell time : 3±0.3s.</p> <p>Solder position : Until both terminations are completely soaked.</p>	
9	Resistance to solder heat	<p>External appearance</p> <p>Capacitance</p> <p>Direct current resistance (Rdc)</p>	<p>No cracks are allowed and terminations shall be covered at least 60% with new solder.</p> <p>Change from the value before test</p> <p>± 7.5 %</p> <p>Please contact with our sales representative.</p>	<p>Solder : Sn-3.0Ag-0.5Cu</p> <p>Flux : Isopropyl alcohol (JIS K 8839) Rosin (JIS K 5902) 25% solid solution.</p> <p>Solder temp. : 260±5°C</p> <p>Dwell time : 10±1s.</p> <p>Solder position : Until both terminations are completely soaked.</p> <p>Pre-heating : Temp. — 110~140°C Time — 30~60s.</p> <p>Leave the products in ambient condition for 24±2h before measurement.</p>
10	Vibration	<p>External appearance</p> <p>Capacitance</p> <p>Direct current resistance (Rdc)</p>	<p>No mechanical damage.</p> <p>Change from the value before test</p> <p>± 7.5 %</p> <p>Please contact with our sales representative.</p>	<p>Applied force : 5G max.</p> <p>Frequency : 10~2,000Hz</p> <p>Reciprocating sweep time : 20 min.</p> <p>Cycle : 12 cycles in each 3 mutually perpendicular directions.</p> <p>Reflow solder the products on a P.C.Board shown in Appendix 2 before testing.</p>

(continued)

		Direct current resistance (Rdc)	Please contact with our sales representative.
		Insulation Resistance	1,000MΩ or 50MΩ·μF min. (As for the products of rated voltage 16V DC and lower, 10MΩ·μF min.), whichever smaller.
			<p>Test temp. : Maximum operating temperature±2°C</p> <p>Applied voltage : Please contact with our sales representative.</p> <p>Test time : 1,000 +48,0h</p> <p>Charge/discharge current : 50mA or lower</p> <p>Leave the products in ambient condition for 24±2h before measurement.</p> <p>Reflow solder the products on a P.C.Board shown in Appendix2 before testing.</p> <p>Initial value setting</p> <p>Voltage conditioning 《After voltage treat the products under testing temperature and voltage for 1 hour,》 leave the products in ambient condition for 24±2h before measurement.</p> <p>Use this measurement for initial value.</p>

*As for the initial measurement of product on number 7, 9, 10, 11 and 12, leave products at 150 0,-10°C for 1h and measure the value after leaving product for 24±2h in ambient condition.

Appendix 1

P.C.Board for bending test

Appendix 2

P.C.Board for reliability test

(Unit: mm)

Type	Symbol	Dimensions					F
		a	b	c	d	e	
YFF18		1.0	0.6	0.4	0.6	0.4	0.4
YFF21		1.4	0.6	0.5	0.8	0.6	0.65
YFF31		2.5	1.2	1.4	1.3	0.8	0.9

1. Material : Glass Epoxy(As per JIS C6484 GE4)

2. Thickness : Appendix 1 — 1.0mm
 : Appendix 2 — 1.6mm

 Copper(Thickness:0.07mm)
 Solder resist

7. INSIDE STRUCTURE AND MATERIAL

No.	NAME	MATERIAL
1	Dielectric	CaZrO ₃ or BaTiO ₃
2	Electrode	Ni
3	Termination	Cu
4		Ni
5		Sn

8. PACKAGING

Packaging shall be done to protect the components from the damage during transportation and storing, and a label which has the following information shall be attached.
Tape packaging is as per 12. TAPE PACKAGING SPECIFICATION.

- 1) Inspection No.
- 2) TDK P/N
- 3) Customer's P/N
- 4) Quantity

*Composition of Inspection No.

Example E 2 A - 23 - 001
 (a) (b) (c) (d) (e)

- (a) Line code
- (b) Last digit of the year
- (c) Month and A for January and B for February and so on. (Skip I)
- (d) Inspection Date of the month.
- (e) Serial No. of the day

*Composition of new Inspection No.

(Implemented on and after May 1, 2019 in sequence)

Example

1	F	2	E	2	3	A	0	0	1
---	---	---	---	---	---	---	---	---	---

 (a) (b) (c) (d) (e) (f) (g)

- (a) Prefix
- (b) Line code
- (c) Last digit of the year
- (d) Month and A for January and B for February and so on. (Skip I)
- (e) Inspection Date of the month.
- (f) Serial No. of the day(00 ~ ZZ)
- (g) Suffix(00 ~ ZZ)

* It was shifted to the new inspection No. on and after May 2019, but the implementation timing may be different depending on shipment bases.
Until the shift is completed, either current or new composition of inspection No. will be applied.

9. SOLDERING CONDITION

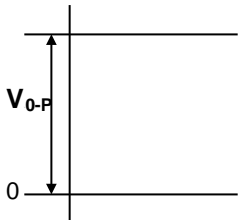

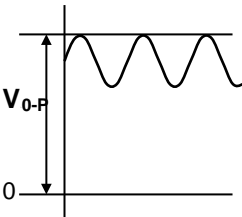

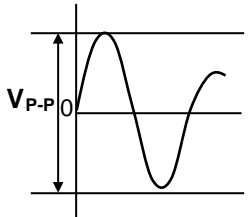

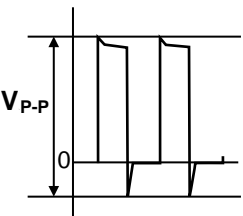

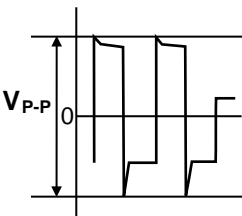

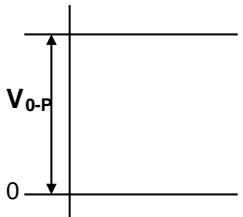

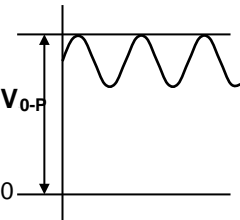

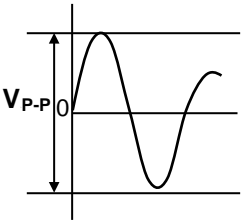

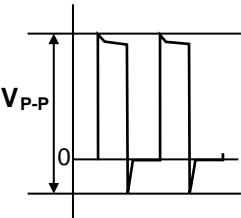

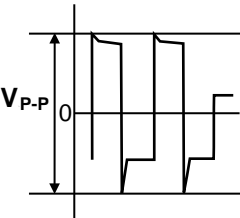

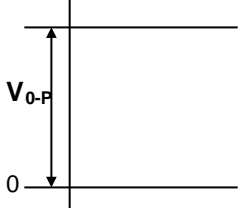

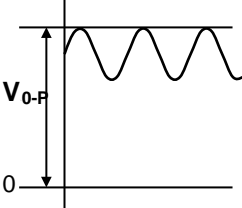

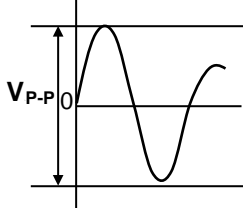

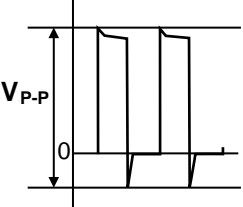

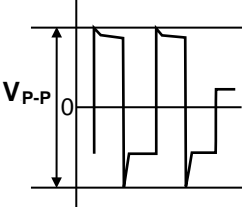

Reflow soldering only.

10. EQUIVALENT CIRCUIT DIAGRAM

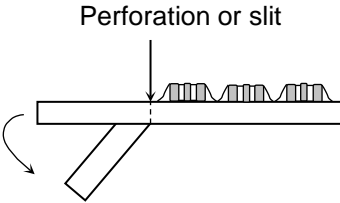

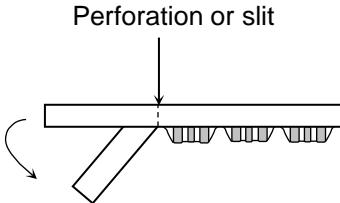

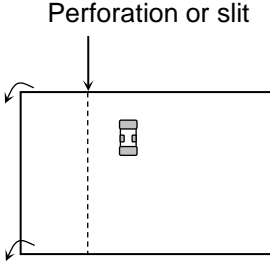

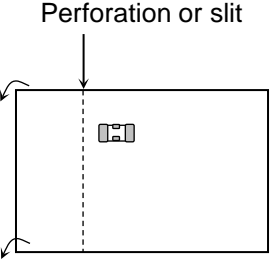

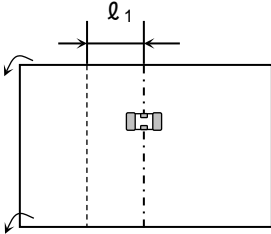

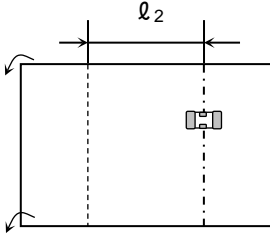

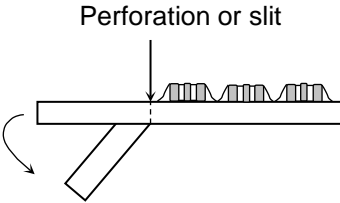

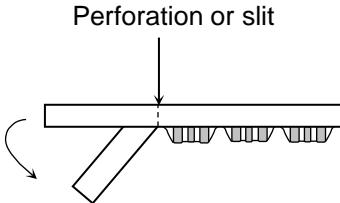

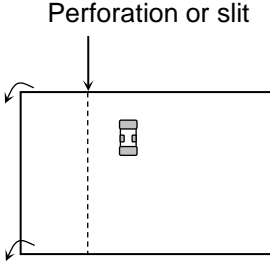

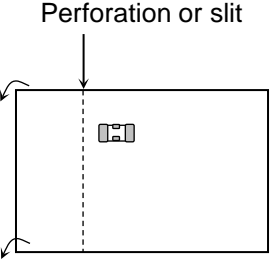

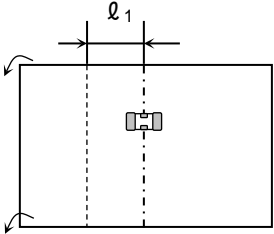

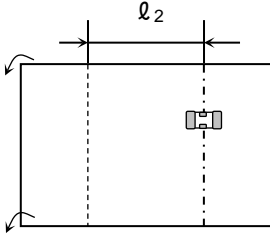

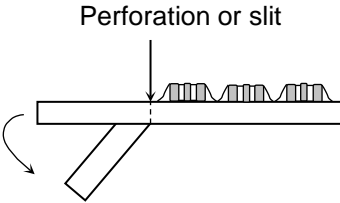

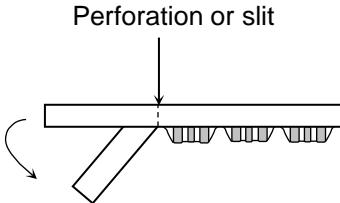

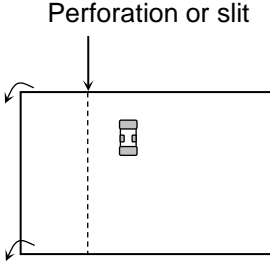

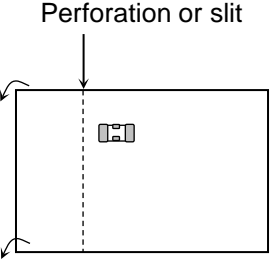

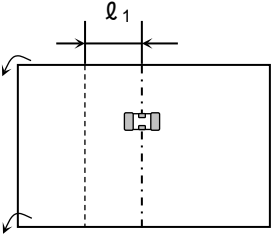

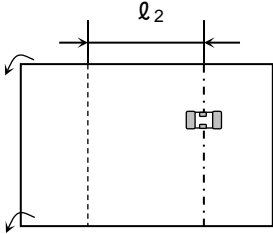

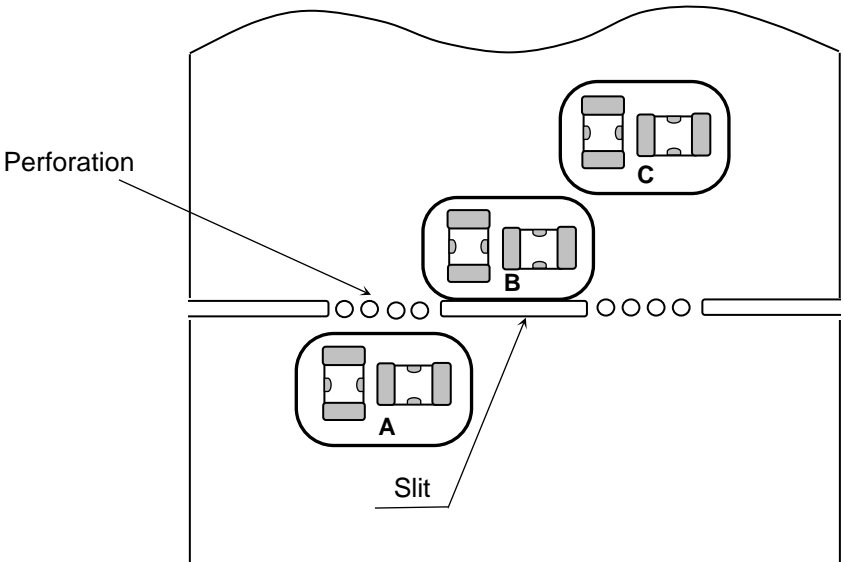

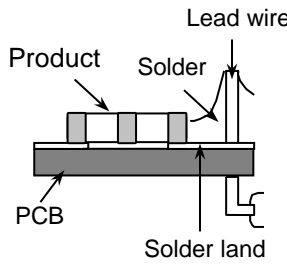

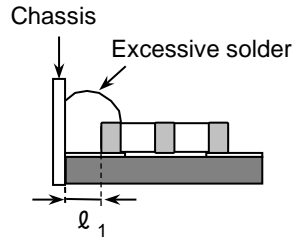

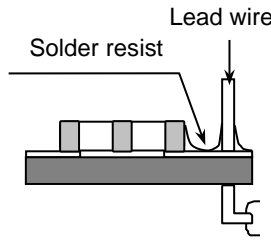

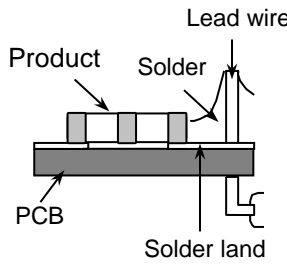

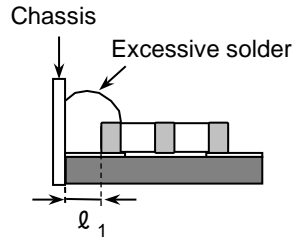

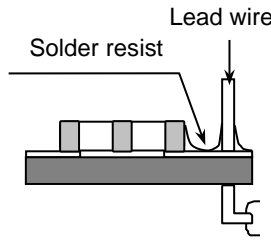

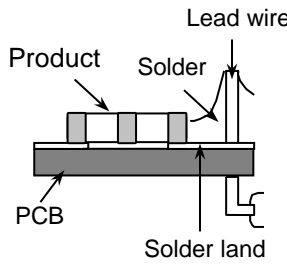

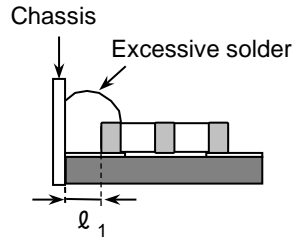

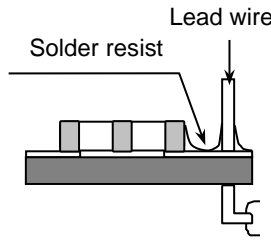

11. CAUTION

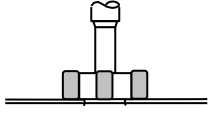

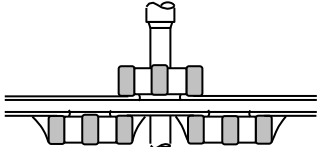

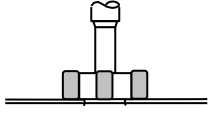

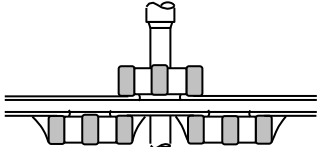

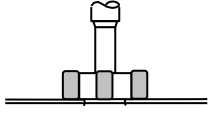

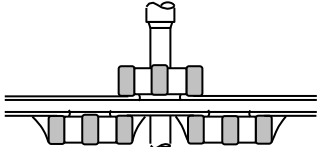

No.	Process	Condition
1	Operating Condition (Storage, Use, Transportation)	<p>1-1. Storage, Use</p> <p>The products must be stored in an ambient temperature of 5 to 40°C with a relative humidity of 20 to 70%RH. JIS C 60721-3-1 Class 1K2 should be followed for the other climatic conditions.</p> <ol style="list-style-type: none"> 1) High temperature and humidity environment may affect a product's solder ability because it accelerates terminal oxidization. They also deteriorate performance of taping and packaging. Therefore, SMD products shall be used within 6 months. For products with terminal electrodes consisting of silver or silver-palladium which tend to become oxidized or sulfurized, use as soon as possible, such as within one month after opening the bag. 2) When products are stored for a longer time period than 6 months, confirm the solderability of the products prior to use. During storage, keep the minimum packaging unit in its original packaging without opening it. Do not deviate from the above temperature and humidity conditions even for a short term. 3) Corrosive gasses in the air or atmosphere may result in deterioration of the reliability, such as poor solderability of the terminal electrodes. Do not store products where they will be exposed to corrosive gas (e.g., hydrogen sulfide, sulfur dioxide, chlorine ammonia etc.) 4) Solderability and electrical performance may deteriorate due to photochemical change in the terminal electrode if stored in direct sunlight, or due to condensation from rapid changes in humidity. The products especially which use resin material must be operated and stored in an environment free of dew condensation, as moisture absorption due to condensation may affect the performance. 5) Refer to JIS C 60721-3-1, class 1K2 for other climate conditions. <p>1-2. Handling in transportation</p> <p>In case of the transportation of the products, the performance of the product may be deteriorated depending on the transportation condition. (Refer to JEITA RCR-2335C 9.2 Handling in transportation)</p>
2	Circuit design  Caution	<p>2-1. Operating temperature</p> <ol style="list-style-type: none"> 1) Upper category temperature (maximum operating temperature) is specified. It is necessary to select a product whose rated temperature is higher than the operating temperature. Also, it is necessary to consider the temperature distribution in the equipment and seasonal temperature variation. 2) Surface temperature including self heating should be below maximum operating temperature. Due to dielectric loss, products will heat itself when AC is applied due to ESR. Especially at high frequencies, please be careful that the heat might be so extreme. Also, even if the surface temperature of the product includes self-heating and is the maximum operating temperature or lower, excessive heating of the product due to self-heating may cause deterioration of the characteristics and reliability of the product. The self-heating temperature rise of the product changes depending on the difference in heat radiation due to the mounting method to the device, the ambient temperature, the cooling method of the device and circuit board material and the design, etc. The load should be contained so that the self-heating temperature rise of the product body in a natural convection environment at an ambient temperature of 25°C remain below 20°C. <p>When using in a high-frequency circuit or a circuit in which a product generates heat, such as when a high-frequency ripple current flows, pay attention to the above precautions. (Note that accurate measurement may not be possible with self-heating measurement when the equipment applies cooling other than natural convection such as a cooling fan.)</p>

No.	Process	Condition														
2	Circuit design  Caution	<p>3) The electrical characteristics of the products will vary depending on the temperature. The products should be selected and designed in taking the temperature into consideration.</p> <p>2-2. When overvoltage is applied Applying overvoltage to a product may cause dielectric breakdown and result in a short circuit. The duration until dielectric breakdown depends on the applied voltage and the ambient temperature.</p> <p>2-3. Operating voltage 1) Operating voltage across the terminals should be below the rated voltage. When AC and DC are super imposed, V_{0-P} must be below the rated voltage. — (1) and (2) AC or pulse with overshooting, V_{P-P} must be below the rated voltage. — (3), (4) and (5) When the voltage is started to apply to the circuit or it is stopped applying, the irregular voltage may be generated for a transit period because of resonance or switching. Be sure to use the product within rated voltage containing these Irregular voltage.</p> <table border="1" data-bbox="488 801 1461 1070"> <thead> <tr> <th data-bbox="488 801 679 837">Voltage</th> <th data-bbox="679 801 938 837">(1) DC voltage</th> <th data-bbox="938 801 1197 837">(2) DC+AC voltage</th> <th data-bbox="1197 801 1461 837">(3) AC voltage</th> </tr> </thead> <tbody> <tr> <td data-bbox="488 837 679 1070">Positional Measurement (Rated voltage)</td> <td data-bbox="679 837 938 1070">  </td> <td data-bbox="938 837 1197 1070">  </td> <td data-bbox="1197 837 1461 1070">  </td> </tr> </tbody> </table> <table border="1" data-bbox="488 1102 1200 1370"> <thead> <tr> <th data-bbox="488 1102 679 1137">Voltage</th> <th data-bbox="679 1102 938 1137">(4) Pulse voltage (A)</th> <th data-bbox="938 1102 1200 1137">(5) Pulse voltage (B)</th> </tr> </thead> <tbody> <tr> <td data-bbox="488 1137 679 1370">Positional Measurement (Rated voltage)</td> <td data-bbox="679 1137 938 1370">  </td> <td data-bbox="938 1137 1200 1370">  </td> </tr> </tbody> </table> <p>2) Even below the rated voltage, if repetitive high frequency AC or pulse is applied, the reliability of the products may be reduced.</p> <p>3) The effective capacitance will vary depending on applied DC and AC voltages. The products should be selected and designed in taking the voltages into consideration.</p> <p>4) Abnormal voltage (surge voltage, static electricity, pulse voltage, etc.) shall not exceed the rated voltage.</p> <p>5) When products are used in a series connection, it is necessary to add a balancing circuit such as voltage dividing resistors in order to avoid an imbalance in the voltage applied to each product.</p> <p>2-4. Frequency When the products are used in AC and/or pulse voltages, the products may vibrate themselves and generate audible sound.</p> <p>2-5. Derating current This product allows DC current to flow inside. Do not use this product above the rated DC current.</p>	Voltage	(1) DC voltage	(2) DC+AC voltage	(3) AC voltage	Positional Measurement (Rated voltage)				Voltage	(4) Pulse voltage (A)	(5) Pulse voltage (B)	Positional Measurement (Rated voltage)

7	Cleaning	<p>1) If an unsuitable cleaning fluid is used, flux residue or some foreign articles may stick to product surface to deteriorate especially the insulation resistance.</p> <p>2) If cleaning condition is not suitable, it may damage the product.</p> <p>2)-1. Insufficient washing</p> <p>(1) Terminal electrodes may corrode by Halogen in the flux.</p> <p>(2) Halogen in the flux may adhere on the surface of product, and lower the insulation resistance.</p> <p>(3) Water soluble flux has higher tendency to have above mentioned problems (1) and (2).</p> <p>2)-2. Excessive washing</p> <p>When ultrasonic cleaning is used, excessively high ultrasonic energy output can affect the connection between the ceramic product body and the terminal electrode. To avoid this, following is the recommended condition.</p> <p style="text-align: center;">Power : 20 W/l max. Frequency : 40 kHz max. Washing time : 5 minutes max.</p> <p>2)-3. If the cleaning fluid is contaminated, density of Halogen increases, and it may bring the same result as insufficient cleaning.</p>
8	Coating and molding of the P.C.board	<p>1) When the P.C.board is coated, please verify the quality influence on the product.</p> <p>2) Please verify carefully that there is no harmful decomposing or reaction gas emission during curing which may damage the product.</p> <p>3) Please verify the curing temperature.</p>
9	Handling after chip mounted  Caution	<p>1) Please pay attention not to bend or distort the P.C.board after soldering in handling otherwise the product may crack.</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>Bend</p>  </div> <div style="text-align: center;"> <p>Twist</p>  </div> </div>

No.	Process	Condition																				
9	Handling after chip mounted  Caution	<p>2) Printed circuit board cropping should not be carried out by hand, but by using the proper tooling. Printed circuit board cropping should be carried out using a board cropping jig as shown in the following figure or a board cropping apparatus to prevent inducing mechanical stress on the board.</p> <p>(1) Example of a board cropping jig Recommended example: The board should be pushed from the back side, close to the cropping jig so that the board is not bent and the stress applied to the product is compressive. Unrecommended example: If the pushing point is far from the cropping jig and the pushing direction is from the front side of the board, large tensile stress is applied to the product, which may cause cracks.</p> <div style="display: flex; justify-content: space-around;"> <div data-bbox="459 593 758 884"> <p>Outline of jig</p> </div> <div data-bbox="762 586 1439 851"> <table border="1"> <thead> <tr> <th data-bbox="769 595 1098 645">Recommended</th> <th data-bbox="1098 595 1439 645">Unrecommended</th> </tr> </thead> <tbody> <tr> <td data-bbox="769 645 1098 851"> </td> <td data-bbox="1098 645 1439 851"> </td> </tr> </tbody> </table> </div> </div> <p>(2) Example of a board cropping machine An outline of a printed circuit board cropping machine is shown below. The top and bottom blades are aligned with one another along the lines with the V-grooves on printed circuit board when cropping the board. Unrecommended example: Misalignment of blade position between top and bottom, right and left, or front and rear blades may cause a crack in the product.</p> <div style="display: flex; justify-content: space-around;"> <div data-bbox="526 1176 941 1422"> <p>Outline of machine</p> </div> <div data-bbox="933 1176 1380 1422"> <p>Principle of operation</p> </div> </div> <div style="text-align: center; margin-top: 10px;"> <p>Cross-section diagram</p> </div> <table border="1" style="width: 100%; text-align: center; margin-top: 20px;"> <thead> <tr> <th data-bbox="641 1653 821 1742">Recommended</th> <th colspan="3" data-bbox="821 1653 1353 1697">Unrecommended</th> </tr> <tr> <th data-bbox="641 1742 821 1792"></th> <th data-bbox="821 1697 997 1792">Top-bottom misalignment</th> <th data-bbox="997 1697 1173 1792">Left-right misalignment</th> <th data-bbox="1173 1697 1353 1792">Front-rear misalignment</th> </tr> </thead> <tbody> <tr> <td data-bbox="641 1792 821 2083"> </td> <td data-bbox="821 1792 997 2083"> </td> <td data-bbox="997 1792 1173 2083"> </td> <td data-bbox="1173 1792 1353 2083"> </td> </tr> <tr> <td data-bbox="641 2083 821 2101">Top blade Board Bottom blade</td> <td data-bbox="821 2083 997 2101">Top blade Bottom blade</td> <td data-bbox="997 2083 1173 2101">Top blade Bottom blade</td> <td data-bbox="1173 2083 1353 2101">Top blade Bottom blade</td> </tr> </tbody> </table>	Recommended	Unrecommended			Recommended	Unrecommended				Top-bottom misalignment	Left-right misalignment	Front-rear misalignment					Top blade Board Bottom blade	Top blade Bottom blade	Top blade Bottom blade	Top blade Bottom blade

11	Caution during operation of equipment	<p>1) A product shall not be touched directly with bare hands during operation in order to avoid electric shock. Electric energy held by the product may be discharged through the human body when touched with a bare hand. Even when the equipment is off, a product may stay charged. The product should be handled after being completely discharged using a resistor.</p> <p>2) The terminals of a product shall not be short-circuited by any accidental contact with a conductive object. A product shall not be exposed to a conductive liquid such as an acid or alkali solution. A conductive object or liquid, such as acid and alkali, between the terminals may lead to the breakdown of a product due to short circuit</p> <p>3) Confirm that the environment to which the equipment will be exposed during transportation and operation meets the specified conditions. Do not to use the equipment in the following environments.</p> <p>(1) Environment where a product is splattered with water or oil (2) Environment where a product is exposed to direct sunlight (3) Environment where a product is exposed to Ozone, ultraviolet rays or radiation (4) Environment where a product exposed to corrosive gas(e.g. hydrogen sulfide, sulfur dioxide, chlorine. ammonia gas etc.) (5) Environment where a product exposed to vibration or mechanical shock exceeding the specified limits. (6) Atmosphere change with causes condensation</p>
12	Others  Caution	<p>The product listed in this specification is intended for use in automotive applications under-normal operation and usage conditions.</p> <p>The product is not designed or warranted to meet the requirements of application listed below, whose performance and/or quality requires a more stringent level of safety or reliability, or whose failure, malfunction or defect could cause serious damage to society, person or property. Please understand that we are not responsible for any damage or liability caused by use of the products in any of the applications below or for any other use exceeding the range or conditions set forth in this specification sheet. If you intend to use the products in the applications listed below or if you have special requirements exceeding the range or conditions set forth in this specification, please contact us.</p> <p>(1) Aerospace/Aviation equipment (2) Transportation equipment (electric trains, ships etc.) (3) Medical equipment (Excepting Pharmaceutical Affairs Law classification Class1, 2) (4) Power-generation control equipment (5) Atomic energy-related equipment (6) Seabed equipment (7) Transportation control equipment (8) Public information-processing equipment (9) Military equipment (10) Electric heating apparatus, burning equipment (11) Disaster prevention/crime prevention equipment (12) Safety equipment (13) Other applications that are not considered general-purpose applications</p> <p>When designing your equipment even for general-purpose applications, you are kindly requested to take into consideration securing protection circuit/device or providing backup circuits in your equipment.</p> <p>In addition, although the product listed in this specification is intended for use in automotive applications as described above, it is not prohibited to use for general electronic equipment, whose performance and/or quality doesn't require a more stringent level of safety or reliability, or whose failure, malfunction or defect could not cause serious damage to society, person or property.</p> <p>Therefore, the description of this caution will be applied, when the product is used in general electronic equipment under a normal operation and usage conditions.</p>

12. TAPE PACKAGING SPECIFICATION

1. CONSTRUCTION AND DIMENSION OF TAPING

1-1. Dimensions of carrier tape

Dimensions of paper tape shall be according to Appendix 3.

Dimensions of plastic tape shall be according to Appendix 4.

1-2. Bulk part and leader of taping

1-3. Dimensions of reel

Dimensions of $\phi 178$ reel shall be according to Appendix 5.

Dimensions of $\phi 330$ reel shall be according to Appendix 6.

1-4. Structure of taping

<Paper>

<Plastic>

2. PRODUCT QUANTITY

Please refer to detail page on TDK web.

3. PERFORMANCE SPECIFICATIONS

- 3-1. Fixing peeling strength (top tape)
 $0.05\text{N} < \text{Peeling strength} < 0.7\text{N}$

〈Paper〉

〔 Paper tape should not adhere to top cover tape when pull the cover tape. 〕

〈Plastic〉

- 3-2. Carrier tape shall be flexible enough to be wound around a minimum radius of 30mm with components in tape.

3-3. The missing of components shall be less than 0.1%

3-4. Components shall not stick to fixing tape.

3-5. When removing the cover tape, there shall not be difficulties by unfitting clearance gap, burrs and crushes of cavities. Also the sprocket holes shall not be covered by absorbing dust into the suction nozzle.
