

### 750 Watts

- 200 - 425VDC Input Range
- Single Output
- Output Trim -40% to +10%
- Industry Standard Full Brick Package
- 3kVAC Isolation Reinforced
- Remote On/Off
- Current Share and Power Good Signals
- -40°C to +85°C Operation
- 3 Year Warranty

#### Dimensions:

**QHL750:**  
4.6 x 2.4 x 0.5" (116.8 x 61.0 x 12.7 mm)

The QHL750 extends the product range of high voltage input DC-DC modules to 750W in a full brick module. This series of modules enables effective construction of distributed power architectures from AC front ends, PFC front ends and battery systems.

### Application Notes

#### Input Fusing and Safety Considerations

The QHL750 series converters have no internal fuse. In order to achieve maximum safety and system protection, always use an input line fuse. We recommended a 10A fast acting fuse. It is also recommended that the circuit has a transient voltage suppressor diode (TVS) across the input terminals to protect the unit against surge or spike voltages and input reverse voltage (as shown). A suitable part would be SMCJ78A.

#### Output Voltage Adjustment

The Trim input permits the user to adjust the output voltage up by 10% or down by 40%. This is accomplished by connecting a mandatory external resistor between the Trim pin and negative sense pin of value 6.8kOhm. Then select Ru or Rd to determine desired output voltage.

#### Output Voltage Sensing

The module will automatically trim the output voltage via the sense pins to the default values either locally or at the load. If not required, the sense pins should be connected locally as indicated in the example EMC circuit.

#### Airflow Derating Graph - Without Heatsink

Air Flow Rate	Typical Rca
Natural Convection 20 ft/min (0.1 m/s)	3.82 °C/W
100 ft/min (0.5 m/s)	3.23 °C/W
200 ft/min (1.0 m/s)	2.71 °C/W
300 ft/min (1.5 m/s)	2.28 °C/W
400 ft/min (2.0 m/s)	1.92 °C/W
500 ft/min (2.5 m/s)	1.68 °C/W
600 ft/min (2.5 m/s)	1.50 °C/W
700 ft/min (2.5 m/s)	1.35 °C/W
800 ft/min (2.5 m/s)	1.23 °C/W

#### Example (Without Heatsink)

To determine the minimum airflow necessary for a QHL750300S48 operating at an input voltage of 300 V, an output current of 11A, and a maximum ambient temperature of 25°C:

Determine Power dissipation (Pd):  $Pd = Pi - Po = Po(1-\eta)/\eta$ ,

$$Pd = 48V \times 11A \times (1-0.91) / 0.91 = 47.47W$$

Where Pi = Input power, Po = Output Power and  $\eta$  = Efficiency

Determine airflow from airflow derating graph using data points for Pd = 47.4W and Ta = 25°C

Minimum airflow= 800ft./min.

To check that the maximum case temp of 85°C is not exceeded:

Maximum temperature rise is

$$\Delta T = Pd \times Rca = 47.47 \times 1.23 = 58.38^\circ C.$$

Maximum case temperature is

$$Tc = Ta + \Delta T = 83.38^\circ C < 85^\circ C.$$

Where: Rca is the thermal resistance from case to ambient environment. Ta is ambient temperature and Tc is case temperature.

#### Notes

**C3 and C4:** aluminium electrolytic capacitors

**C3:** is recommended to be 330 $\mu$ F 450V for operation to -40°C type Nippon Chemi-Con KXG series or equivalent. The value of C3 can be reduced to 150 $\mu$ F for operation to -20°C.

**C4:** 820 $\mu$ F / 63V Rubycon ZLH series or equivalent

**CY1, CY1A, CY2, CY2A, CY3 and CY4:** Ceramic TDK CD series or equivalent.

**C5:** Ceramic TDK CGA series or equivalent

**C1, C2, CY5 and CY6:** 0.68 $\mu$ F / 305VAC X2 rated MKP series, 0.022 $\mu$ F / 275VAC X2 rated MPX series – or equivalent

**L1, L2:** 4.2 mH (VAKOS T25\*15\*13 R8K Series 0.8mm/20T) or equivalent.

#### Safety Considerations

The use of a fuse on the input line is recommended for good practice. Additional protection for surges and reverse voltage are also recommended. Transient voltage suppressors and gas discharge devices can be fitted across the input terminals.

#### Ground Connection

The above circuit assumes an earth connection is available. If no earth present CY capacitors should be connected to case as shown. CY values might require adjustment depending on the application. Please consult XP Power applications engineering for further support.
