### Surface Mount LED Indicator

## Description

The Broadcom<sup>®</sup> Power PLCC-4 SMT LEDs with Lens are high-performance PLCC-4 package size SMT LEDs targeted mainly in Automotive and Electronic Signs and Signals (ESS) markets. These top-mount single-chip packages with focused radiation offer high brightness in beam direction and are excellent for interior automotive, indoor and outdoor sign and industrial applications. With additional lens in 30° variants, these products are especially fitting to applications for traffic lights, CHMSL, and displays.

The PLCC-4 package family is able to dissipate heat better compared to the PLCC-2 packages. In proportion to this increase in driving current, this family of LEDs is able to produce higher light output compared to the conventional PLCC-2 SMT LEDs.

As an extension of the standard flat top PLCC-4 SMT LEDs, the Power PLCC-4 with Lens device is able to provide focused beams within narrow viewing angles (30°) meeting the market's requirements for focused radiation and high brightness in beam directions.

The Power PLCC-4 SMT LED with 30° is ideal for panel, push button, or general backlighting in automotive interior and exterior, sign, office equipment, industrial equipment, and home appliances applications. This package design, coupled with careful selection of component materials, allows the Power PLCC-4 SMT LED with Lens to perform with higher reliability in a larger temperature range -40 °C to 100 °C. This high reliability feature is crucial to allow the Power PLCC-4 SMT LED with Lens to perform well in harsh environments, such as its target Automotive and ESS markets. The Power PLCC-4 SMT LED with Lens package is also designed to be compatible with both IR-solder reflow and through-the-wave soldering.

## Features

- Industry-standard PLCC-4
- High reliability LED package
- High brightness using AlInGaP and InGaN dice technologies
- High optical efficiency
- Narrow viewing angle at 30°
- Available in 8-mm carrier tape on 7-inch reel
- Compatible with both IR and TTW soldering process

## Applications

### Interior automotive:

- Instrument panel backlighting
- Central console backlighting
- Cabin backlighting
- Navigation and audio system
- Dome lighting
- Push button backlighting

### Exterior automotive:

- Turn signals
- CHMSL
- Rear combination lamp
- Side repeaters

### Electronic signs and signals:

- Interior and exterior full color sign
- Variable message sign
- Garden lighting

### Office automation, home appliances, industrial equipment:

- Front panel backlighting
- Push button backlighting
- Display backlighting

**CAUTION!** This LED is ESD sensitive. Please observe appropriate precautions during handling and processing. Refer to application note AN-1142 for additional details.

The Broadcom Power PLCC-4 SMT LED with 30° Lens carries the part number HSMx- A43x-xxxxx. The high brightness AllnGaP and InGaN dice technologies used provide the product brightness that meets the Automotive and ESS market requirements. The lens package will complement and complete the existing AllnGaP and InGaN color standard Power-PLCC-4 LED that Broadcom offers, providing customers an extra lens option from one supplier.

To facilitate easy pick-and-place assembly, the LEDs are packed in EIA-compliant tape and reel. Every reel is shipped in single intensity and color bin (except for red color), to provide close uniformity.

### NOTE:

1. The luminous intensity,  $I_V$ , is measured at the mechanical axis of the lamp package. The actual peak of the spatial radiation pattern might not be aligned with this axis.
2.  $I_V$  tolerance is  $\pm 12\%$ .

Green	HSMM-A430	InGaN	518	525	30	500
Blue	HSMN-A430	InGaN	468	470	30	75

a. The dominant wavelength,  $\lambda_{\text{D}}$ , is derived from the CIE Chromaticity Diagram and represents the color of the device.

b.  $\theta_{1/2}$  is the off-axis angle where the luminous intensity is  $1/2$  the peak intensity.

c. Radiant intensity,  $I_e$  in watts/steradian, can be calculated from the equation  $I_e = I_V/\eta_V$ , where  $I_V$  is the luminous intensity in candelas and  $\eta_V$  is the luminous efficacy in lumens/watt.

## Handling of Moisture-Sensitive Devices

This product is qualified as Moisture Sensitive Level 2a per JEDEC J-STD-020. The following precautions for handling this moisture-sensitive product will help to ensure the reliability of the product. Refer to Broadcom Application Note AN5305, *Handling of Moisture Sensitive Surface Mount Devices*, for details.

- Before use:
  - An unopened moisture barrier bag (MBB) can be stored at <math>40^{\circ}\text{C}/90\% \text{RH}</math> for 12 months. If the actual shelf life has exceeded 12 months and the humidity indicator card (HIC) indicates that baking is not required, it is safe to reflow the LEDs per the original MSL rating.
  - Do not open the MBB prior to assembly (for example, for IQC).
- Control after opening the MBB:
  - Read the HIC immediately upon opening of the MBB.
  - Keep the LEDs at <math>30^{\circ}\text{C}/60\% \text{RH}</math> at all times, and complete all high temperature-related processes, including soldering, curing, or rework within 672 hours.
- Control for unfinished reel:
 

Store unused LEDs in a sealed MBB with desiccant or a desiccator at <math>5\% \text{RH}</math>.

- Control of assembled boards:
 

If the PCB soldered with the LEDs is to be subjected to other high-temperature processes, store the PCB in a sealed MBB with desiccant or desiccator at <math>5\% \text{RH}</math> to ensure that all LEDs have not exceeded their floor life of 672 hours.
- Baking is required if the following conditions exist:
  - The HIC indicator indicates a change in color for 10% and 5%, as stated on the HIC.
  - The LEDs are exposed to conditions of <math>30^{\circ}\text{C}/60\% \text{RH}</math> at any time.
  - The LED's floor life exceeded 672 hours.

The recommended baking condition is <math>60^{\circ}\text{C} \pm 5^{\circ}\text{C}</math> for 20 hours.

Baking can only be done once.
