

Features

- Latest MOSFET silicon technology
- Key parameters optimized for Class-D audio amplifier applications
- Low $R_{DS(on)}$ for improved efficiency
- Low Q_g for better THD and improved efficiency
- Low Q_{rr} for better THD and lower EMI
- Low package stray inductance for reduced ringing and lower EMI
- Can deliver up to 200 W per channel into 8Ω load in half-bridge configuration amplifier
- Dual sided cooling compatible
- Compatible with existing surface mount technologies
- RoHS compliant, halogen-free
- Lead-free (qualified up to 260°C reflow)

Description

This Digital Audio MOSFET is specifically designed for Class-D audio amplifier applications. This MOSFET utilizes the latest processing techniques to achieve low on-resistance per silicon area. Furthermore, gate charge, body-diode reverse recovery and internal gate resistance are optimized to improve key Class-D audio amplifier performance factors such as efficiency, THD, and EMI.

The IRF6643PbF device utilizes DirectFET[®] packaging technology. DirectFET[®] packaging technology offers lower parasitic inductance and resistance when compared to conventional wirebonded SOIC packaging. Lower inductance improves EMI performance by reducing the voltage ringing that accompanies fast current transients. The DirectFET[®] package is compatible with existing layout geometries used in power applications, PCB assembly equipment and vapor phase, infra-red or convection soldering techniques, when application note AN-1035 is followed regarding the manufacturing method and processes. The DirectFET[®] package also allows dual sided cooling to maximize thermal transfer in power systems, improving thermal resistance and power dissipation. These features combine to make this MOSFET a highly efficient, robust and reliable device for Class-D audio amplifier applications.

†† Applicable version of JEDEC standard at the time of product release.

Notes:

- ① Repetitive rating; pulse width limited by max. junction temperature.
- ② Starting $T_J = 25^\circ\text{C}$, $L = 0.43\text{mH}$, $R_G = 25\Omega$, $I_{AS} = 7.6\text{A}$.
- ③ Surface mounted on 1 in. square Cu board.
- ④ Pulse width $\leq 400\mu\text{s}$; duty cycle $\leq 2\%$.
- ⑤ Coss eff. is a fixed capacitance that gives the same charging time as Coss while V_{DS} is rising from 0 to 80% V_{DSS} .
- ⑥ Used double sided cooling, mounting pad with large heatsink.
- ⑦ Mounted on minimum footprint full size board with metalized back and with small clip heatsink.
- ⑧ T_C measured with thermal couple mounted to top (Drain) of part.
- ⑨ R_θ is measured at T_J of approximately 90°C .
